

How Clever Logger works

The **logger** measures the temperature and wirelessly sends the reading to the gateway. No need to manually download data.

The **gateway** is connected to the internet. It saves a temperature to the online log every few minutes

The incoming data is used to generate reports and send alerts. Everything is managed through a simple dashboard using your favourite browser.

Get started with a Starter Kit

Clever Logger **Starter Kits** contain one **logger** and one **gateway** – everything you need to log a single location.

Add an extra location

Got more than one location to monitor? Your gateway can talk to multiple loggers, as long as they are within range.

Scale up for large organisations

Add as many extra gateways, loggers, sites and users to your Clever Logger account as you like. Assign different permission levels for users. Clever Logger is equally suitable for a single restaurant cool room or a nationwide chain of private hospitals.

No ongoing fees

When you buy a Clever Logger, you are getting a lifetime of alerts, reports and Aussie phone support included. You can have as many users as you like, set up as many reports as you like, receive as many alerts as you like – it's all included in the purchase price. There are no subscription fees or other recurring costs.

Questions?

Clever Logger is a totally new way to log temperature, so it's only natural you will have questions. There is plenty of info on our website, or you can call us on **1300 80 88 89**.
